# Postman

## VS Code Integration

### VS Code Installation

Make sure you have VS Code installed on your system. If not, please do so by downloading VS Code from here https://code.visualstudio.com/ and install it. It should be straightforward. Please let support know if you have issues installing VS Code on your system.

### Postman Integration

There 2 ways of installing Postman:

1. Using the marketplace's link https://marketplace.visualstudio.com/items?itemName=Postman.postman-for-vscode. You will be prompted to open this with VS Code. Do so and the installation should happen.
2. Or use the Extension icon from VS Code and follow the steps from there.

The next pictures show the step-by-step install process of Postman in VS Code:

# Download Postman as a Standalone application

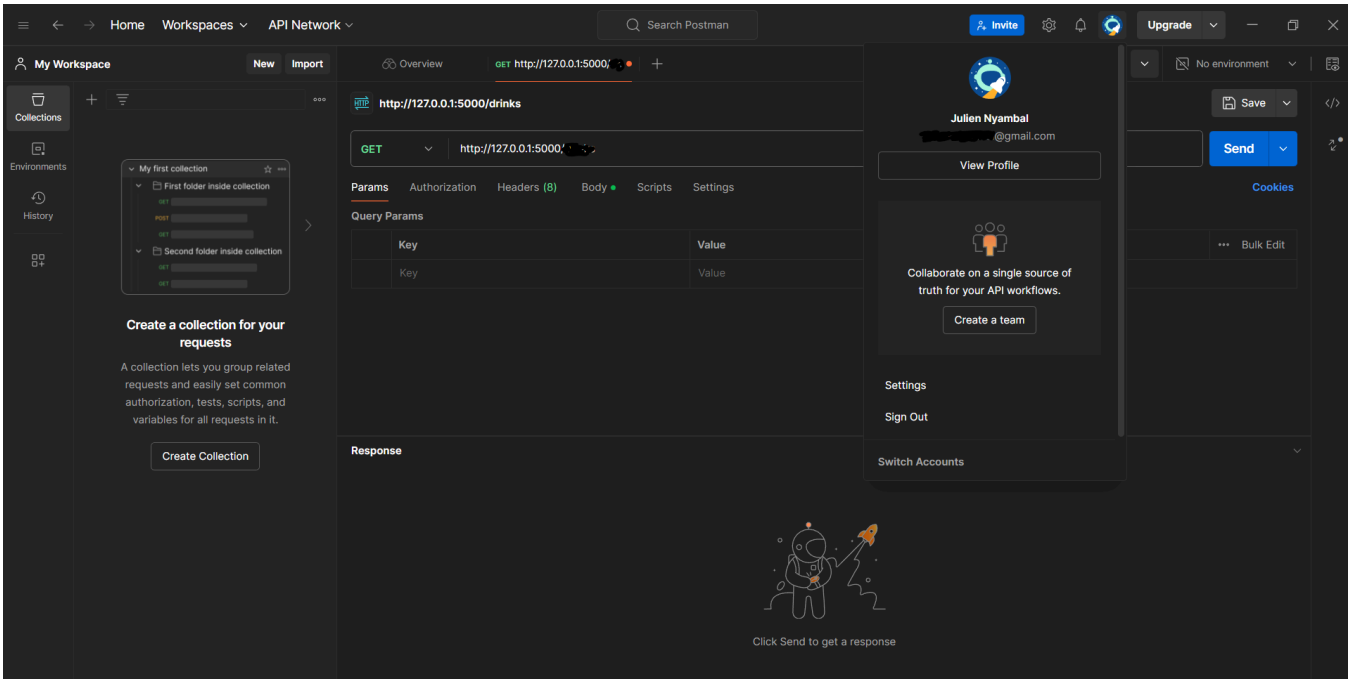
Either search on Google “Download Postman” or navigate to “https://www.postman.com/downloads/”. The installation link should be named after the Operating System requesting the page.

## Install Postman

Once the file is downloaded, double-click on it and install Postman.

## Start using Postman

You will be required to sign in.



After you sign in, you should be good to go!

Good luck!
